A collation of the Robinson-Pierpont 2018 text against all transcribed Greek New Testament witnesses

Table of contents

Note

- Most manuscripts have not been transcribed and in consequence these apparatuses contain only a sample of the extant corpus.
- The collations and apparatuses have been created using automated algorithms and may in consequence display occasional imprecisions, especially in word alignment when there is significant textual variation in a verse. Please use them for indicative purposes only.
- Some manuscripts contain a verse more than once. This often involved splitting a verse and placing each segment on a different section of the manuscript. We have implemented an algorithm that reconstructs the complete verse from the separate segments. Reconstructed verses are shown between round brackets. For example, 40844(1&2) is the verse as it was attested in 40844 in a reconstruction that merged instances 1 and 2. Given that these are automated reconstructions, manual double-checks are advised. Sometimes it is not possible to safely reconstruct a verse and the witnesses where this is the case are not included in the collation (to see the specific witnesses that could not be reconstructed, please consult the witness counts for each verse).
- Corrected witnesses (marked with a superscript letter *c*) are reconstructed automatically and may display inaccuracies. They are shown with a ? sign to reflect this uncertainty. A corrected witness is included in the apparatus if its text is present in at least another witness, ie, if it does not attest to a singular reading.
- A witness is ignored if 60% or more of the words that it contains of the specific verse are uncertain.

Website version 2.0.0, witness transcriptions up-to-date as of October 1, 2023. More information at www.gntcollations.com. Collations created by Norman Simon Rodriguez.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.

[1] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[2] The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (12) minus the fragmentary witnesses (0) plus the included corrected witnesses (1).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 63 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (38) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

[3]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[4]The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (16) minus the fragmentary witnesses (0) plus the included corrected witnesses (1).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IV.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 59 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (37) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IV.

Below is the earliest attestation of each *individual Byzantine reading*:

[5] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[6] The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (7) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 91 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (13) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by

the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the

[7] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[8] The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (5) minus the fragmentary witnesses (0) plus the included corrected witnesses (3).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 56 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (53) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the

[9] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[10] The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (11) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 69 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (31) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.

[11]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[12]The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (13) minus the fragmentary witnesses (1) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: X.

Below is the earliest attestation of each *individual Byzantine reading*:

Reading	Earliest attestation (century)
διελθοντες	IV
δε	IV
την	IX
νησον	IV
αχρι	IV
παφου	IV

βαριησους	IV

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 52 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (46) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

[13]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[14]The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (18) minus the fragmentary witnesses (1) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IV.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 70 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (23) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IV.

[15] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[16] The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (18) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Below is the earliest attestation of each *individual Byzantine reading*:

Reading	Earliest attestation (century)
ανθιστατο	IV

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 69 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (25) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.

[17]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[18]The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (7) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: VI.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts

are identical for the entire verse. There are 89 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (16) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

[19] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[20] The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (15) minus the fragmentary witnesses (1) plus the included corrected witnesses (0).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 65 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (31) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

[21] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[22] The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (12) minus the fragmentary witnesses (1) plus the included corrected witnesses (0).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: VI.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 67 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (32) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.

[23]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[24]The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (4) minus the fragmentary witnesses (2) plus the included corrected witnesses (2).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IV.

Below is the earliest attestation of each *individual Byzantine reading*:

Reading	Earliest attestation (century)
τοτε	IV
ιδων	IV
ο	IV
ανθυπατος	IV
το	IV
γεγονος	IV
επιστευσεν	IV
εκπλησσομενος	IV
επι	IV
τη	IV
διδαχη	IV
του	IV
κυριου	IV

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 90 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (18) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

[25]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[26]The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (7) minus the fragmentary witnesses (1) plus the included corrected witnesses (3).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 69 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (38) attest to singular texts for the entire verse and are

therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

[27] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[28] The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (9) minus the fragmentary witnesses (2) plus the included corrected witnesses (0).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 78 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (23) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

[29]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[30]The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (21) minus the fragmentary witnesses (2) plus the included corrected witnesses (2).

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 57 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (34) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

[31]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[32]The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (11) minus the fragmentary witnesses (1) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 73 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (27) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

[33] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[34] The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (12) minus the fragmentary witnesses (0) plus the included corrected witnesses (2).

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: VI.

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 63 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The

remaining witnesses (38) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.

[35]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[36]The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (6) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

Reading	Earliest attestation (century)
και	IV
ως	IV
τεσσαρακονταετη	IX
χρονον	IV
ετροποφορησεν	IV
αυτους	IV
εν	IV
τη	IV
ερημω	IV

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 85 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (20) attest to singular texts for the entire verse and are

therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

[37] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[38] The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (7) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 77 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The

remaining witnesses (27) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

[39]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[40]The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (7) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 76 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (28) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

[41] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[42] The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (11) minus the fragmentary witnesses (0) plus the included corrected witnesses (1).

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 69 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (32) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

[43] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[44] The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (12) minus the fragmentary witnesses (0) plus the included corrected witnesses (2).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 64 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (37) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

[45] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[46] The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (6) minus the fragmentary witnesses (0) plus the included corrected witnesses (2).

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

Reading	Earliest attestation (century)
τουτου	IV
ο	IV
θεος	IV
απο	IV
του	IV
σπερματος	IV
κατ	IV
επαγγελιαν	IV
ηγαγεν	IV
τω	IV

σωτηριαν	IX

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 76 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (31) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.

[47] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[48] The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (12) minus the fragmentary witnesses (0) plus the included corrected witnesses (2).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 81 witnesses in groups for this

verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (20) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.

[51] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[52] The total number of witnesses is calculated as the total manuscripts (113) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (9) minus the fragmentary witnesses (0) plus the included corrected witnesses (1).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 82 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (23) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the

[53] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[54] The total number of witnesses is calculated as the total manuscripts (113) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (10) minus the fragmentary witnesses (0) plus the included corrected witnesses (2).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 78 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (27) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 78 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (28) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Description	Count	Manuscript list
Corrected witnesses *ignored* from the apparatus[59]	0	None
Number of witnesses that were taken into account in the collation[60]	**113**	For manuscript lists see the apparatus and the witness groups

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.

[59] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[60] The total number of witnesses is calculated as the total manuscripts (114) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (1) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IV.

Below is the earliest attestation of each *individual Byzantine reading*:

Reading	Earliest attestation (century)
ο	III
δε	III
θεος	III
ηγειρεν	IV
αυτον	IV
εκ	IV
νεκρων	IV

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 99 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (14) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

[61] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[62] The total number of witnesses is calculated as the total manuscripts (114) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (10) minus the fragmentary witnesses (2) plus the included corrected witnesses (2).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: X.

Below is the earliest attestation of each *individual Byzantine reading*:

Reading	Earliest attestation (century)

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 66 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (38) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

[63] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[64] The total number of witnesses is calculated as the total manuscripts (113) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (0) minus the fragmentary witnesses (1) plus the included corrected witnesses (1).

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: *Byzantine text not attested in its entirety in any of the collated manuscripts*.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 96 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition

may change as new manuscripts are added to the collation in future. The remaining witnesses (17) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

[65] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[66] The total number of witnesses is calculated as the total manuscripts (113) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (23) minus the fragmentary witnesses (1) plus the included corrected witnesses (0).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: *Byzantine text not attested in its entirety in any of the collated manuscripts*.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 56 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (33) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

[67] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[68] The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (9) minus the fragmentary witnesses (1) plus the included corrected witnesses (1).

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 64 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (39) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

[69]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[70]The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (7) minus the fragmentary witnesses (1) plus the included corrected witnesses (0).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 86 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The

remaining witnesses (18) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

[71] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[72] The total number of witnesses is calculated as the total manuscripts (110) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (18) minus the fragmentary witnesses (1) plus the included corrected witnesses (0).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.

[73]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[74]The total number of witnesses is calculated as the total manuscripts (93) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (1) minus the fragmentary witnesses (1) plus the included corrected witnesses (7).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IV.

Below is the earliest attestation of each *individual Byzantine reading*:

Reading	Earliest attestation (century)
ον	IV
δε	IV
ο	IV
θεος	IV
ηγειρεν	IV
ουκ	IV
ειδεν	IV
διαφθοραν	IV

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 86 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (12) attest to singular texts for the entire verse and are

therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: *Byzantine text not attested in its entirety in any of the collated manuscripts*.

Below is the earliest attestation of each *individual Byzantine reading*:

[75] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[76] The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (15) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 48 witnesses in groups for this

verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (48) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Number of witnesses that were taken into account in the collation[78]	**112**	For manuscript lists see the apparatus and the witness groups

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.

[77] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[78] The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (0) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: *Byzantine text not attested in its entirety in any of the collated manuscripts*.

Below is the earliest attestation of each *individual Byzantine reading*:

Reading	Earliest attestation (century)

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 101 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (11) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: V.

Below is the earliest attestation of each *individual Byzantine reading*:

[79] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[80] The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (4) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 94 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (14) attest to singular texts for the entire verse and are

therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

[83]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[84]The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (15) minus the fragmentary witnesses (1) plus the included corrected witnesses (6).

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 79 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (23) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

[85]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[86]The total number of witnesses is calculated as the total manuscripts (113) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (22) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 48 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (43) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.

[87] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[88] The total number of witnesses is calculated as the total manuscripts (113) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (5) minus the fragmentary witnesses (1) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IV.

Below is the earliest attestation of each *individual Byzantine reading*:

Reading	Earliest attestation (century)
τω	IV
τε	IV
ερχομενω	IV
σαββατω	IV
σχεδον	IV
πασα	IV
η	IV
πολις	IV
συνηχθη	IV
ακουσαι	IV
τον	IV
λογον	IV
του	IV
θεου	IV

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 81 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (26) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): IV.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

[89] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[90] The total number of witnesses is calculated as the total manuscripts (113) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (9) minus the fragmentary witnesses (0) plus the included corrected witnesses (2).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 81 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (25) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

[91] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[92] The total number of witnesses is calculated as the total manuscripts (114) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (21) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 44 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (49) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

[93] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[94] The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (12) minus the fragmentary witnesses (0) plus the included corrected witnesses (1).

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: V.

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 62 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (39) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.

[95]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[96]The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (9) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: X.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 72 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (31) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.

[97]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[98]The total number of witnesses is calculated as the total manuscripts (112) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (4) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IV.

Below is the earliest attestation of each *individual Byzantine reading*:

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 94 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition

may change as new manuscripts are added to the collation in future. The remaining witnesses (14) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.
- Earliest attestation (century) of the *complete, verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IX.

Below is the earliest attestation of each *individual Byzantine reading*:

[101] These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[102] The total number of witnesses is calculated as the total manuscripts (110) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (11) minus the fragmentary witnesses (1) plus the included corrected witnesses (2).

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 76 witnesses in groups for this

verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (24) attest to singular texts for the entire verse and are therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).

Witnesses *ignored* due to being too fragmentary	0	None

Description	Count	Manuscript list
Corrected witnesses *ignored* from the apparatus[103]	0	None
Number of witnesses that were taken into account in the collation[104]	**109**	For manuscript lists see the apparatus and the witness groups

Nomina sacra or abbreviations

Please note that one or more of the witnesses contains *nomina sacra* which have been spelled out by our automated algorithm. This process is very accurate, but occasional mistakes can happen, especially with obscure or uncommon *nomina sacra*. In case of doubt about the actual reading of a *nomen sacrum*, please consult the original transcripts or facsimiles.

Earliest attestation

Note: Most manuscripts have not been transcribed yet. In consequence, the below information is based only on the limited sample available at the moment of creating the apparatus.

- Earliest attestation (century) of the *existence* of this verse (including fragmentary manuscripts): III.

[103]These corrected witnesses offer singular readings for the entire verse, which may indicate that our automated algorithm reconstructed them incorrectly. We are ignoring them from the collation in order to reduce the risk of displaying inaccurate results (the *uncorrected* witness may itself be included in the apparatus).

[104]The total number of witnesses is calculated as the total manuscripts (111) minus the witnesses that attest to the verse more than once and where the verse could not be reconstructed (2) minus the fragmentary witnesses (0) plus the included corrected witnesses (0).

- Earliest attestation (century) of the *complete*, *verbatim text* of the Byzantine texform for this verse in a transcribed manuscript: IV.

Below is the earliest attestation of each *individual Byzantine reading*:

Reading	Earliest attestation (century)
οι	III
δε	IV
μαθηται	IV
επληρουντο	III
χαρας	IV
και	IV
πνευματος	III
αγιου	IV

Witness groups

The below groups show witnesses that share identical texts for the entire verse. That is, any two witnesses belong in the same group if their texts are identical for the entire verse. There are 101 witnesses in groups for this verse. For these, the apparatus lists the group instead of the individual witnesses. The group names are assigned automatically and their composition may change as new manuscripts are added to the collation in future. The remaining witnesses (8) attest to singular texts for the entire verse and are

therefore not part of any group. These non-aligned witnesses are individually shown in the apparatus. Manuscript identifiers are shown preceded by the century of their estimated date (latest estimated date).
